The present invention is directed to a polynucleotide carrying the regulatory expression signals of the ESAT-6 protein as well as an open reading frame coding for an antigenic protein LHP from Mycobacterium tuberculosis. Host cells comprising the polynucleotide are used for the used as immunogens and vaccines, to protect against bacteria of the tweet as immunogens and vaccines, to protect against bacteria of the tweet immunogenic proteins of the bacteria or their fragments, complex in humans or animals (the vaccines may include other immunogenic proteins of the bacteria or their fragments, specifically ESAT-6); and (b) for diagnosing tuberculosis infection by detection of specific antibodies. The regulatory region present in the polynucleotide may be used to express almost any heterologous protein in proteins encoded by the polynucleotide, LHP and ESAT-6, are expected to provide a synergistic increase in ability to induce a protective immune response. The present sequence represents the LHP polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New nucleic acid containing regulator and LHP gene of Mycobacterium tuberculosis – useful in vaccines, for diagnosis, and for expression
                                                                                                                                                                                                                                        ESAT-6 protein; antigenic protein; LHP; Mycobacterium tuberculosis; immunogen; vaccine; bacteria; tuberculosis; regulatory; synergistic;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents an immunogenic portion of a soluble Mycobacterium tuberculosis (MT) antigen which can be used in a method for inducting protective immunity against tuberculosis (TB). This sequence can be formulated into vaccines and/or pharmaceutical compositions for immunising against M. tuberculosis infection or may be used for the diagnosis of tuberculosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Tuberculosis; immunogenic; soluble; antigen; protective immunity; TB;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    E X X X X X D
  of
         derived from clone TDS8-1 (see AAV44384). The invention relates to compositions and methods for diagnosing tuberculosis. It provides polypeptides (see AAV64219-W64379) comprising an antigenic portion of an soluble M. tuberculosis antigen, or an immunogenic portion of an M. tuberculosis antigen, as well as DNA sequences encoding such polypeptides, recombinant expression vectors and transformed or transfected host cells. Also claimed are methods and diagnostic kits for detecting M. tuberculosis infection in a patient using these polypeptides, antibodies or oligonucleotide probes and primers, for the diagnosis of tuberculosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      seq_name: /SIDS1/gcgdata/hold-geneseq/geneseqp-emb1/AA1999.DAT:AAY39136

The present invention describes polypeptides comprising an immunogenic part of a Mycobacterium tuberculosis antigen (Ag). Also described are vaccines and fusion protein containing M. tuberculosis Ag's.

M. tuberculosis Ag's. DNAs encoding them, derived fusion proteins and other polypeptides fragments, can be used in pharmaceutical compositions or vaccines to generate a protective or therapeutic immune response to tuberculosis and as reagents in skin tests for diagnosis of tuberculosis, ag can induce proliferation of, or cytckine secretion by, T. B or natural killer cells and/or macrophages in tuberculosis-immune subjects. AAX19249 to AAX19460 and AAX39083 to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                This invention describes novel recombinant antigens and their encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        nucleic acids derived from Mycobacterium tuberculosis. The novel polypeptides are useful for detecting M. tuberculosis infection in a biological sample by detecting antibodies which bind with the polypeptides, and are useful as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as
            diagnosis; detection; infection; antibody; immunisation;
                                                                                                                                                                                                                                                                                                                                                                                     New polypeptide comprising antigenic portions of M. tuberculosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  current vaccination strategies do not provide 100% immunity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       51 TTTCGAGCGGATCTCCGGCGACCTGAAAACCCAGATCGACCAGGTGGAGT 100

                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is that of the Mycobacterium tuberculosis MTBN4 protein. This is 1 of 8 proteins i.e. MTBN1-8 (see ARB191842-43), encoded by 8 open reading frames (see ARA8935-42) identified as being present in the genome of M. tuberculosis but absent from the genome of the BCG strain of Mycobacterium bovis. WTBN1-8 represent reagents that are useful in discriminating between MTBN1-8 represent reagents that are useful in discriminating between which discriminate between exposure of a subject to M. tuberculosis and vaccination with BCG. The invention features these MTBN polypeptides, functional fragments of them, DNA encoding them, vectors, transformed cells, and diagnostic, therapeutic, and prophylactic (vaccine) methods, including genetic vaccination
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel polypeptide encoded by open reading frames present in Mycobacterium tuberculosis genome and not by the BCG strain of M. bovis, useful as vaccine and for diagnosing tuberculosis infection
                                                                                                                  seq_name: /SIDS1/gcgdata/hold-geneseq/geneseqp-emb1/AA2001.DAT:AAB19845

This sequence represents the fusion protein TbF-2 which is composed of immunogenic polypeptides from Mycobacterium tuberculosis (MT). This protein is used in a method for inducing protective immunity against tuberculosis (TB). This sequence can be formulated into vaccines and/or pharmaceutical compositions for immunising against M. tuberculosis infection or may be used for the diagnosis of TB.
                                                                                                                                                                                                                                                                                                                           Tuberculosis; immunogenic; soluble; antigen; protective immunity; TB; vaccine; pharmaceutical; infection; diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Immunogenic Mycobacterium tuberculosis polypeptide(s) and DNA - use to develop products for the detection of M. tuberculosis infection and for diagnosis, treatment and prevention of tuberculosis

composed of Mycobacterium tuberculosis antigens TBRa3 (see AAW64295), 38 kDa antigen (see AAW64364), TbD8-1 (see AAW6431) and DPEP (see AAW64322). It was produced by PCR amplification (see AAV44450-57) of the appropriate antigen DNA sequences, cloning into an expression vector, and expression in E. coli. TbF-2 can be used for serodiagnosis of tuberculosis. The invention relates to compositions and methods for diagnosing tuberculosis. It provides polypeptides (see AAW64291-W64379) comprising antigens or immunogenic portions of M. tuberculosis antigens, or fusion proteins, DNA sequences encoding such polypeptides, recombinant expression vectors and host cells. Also claimed are methods and diagnostic kits for detecting M. tuberculosis infection in a patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Tuberculosis, antigen, fusion protein; TbF-2; TbRa3; 38kD; Tb38-1; DPEP; diagnosis; therapy; vaccine; immunogen.

M. tuberculosis fusion protein TbF-6 amino acid sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             458
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                475
   New fusion proteins useful for diagnosis, prevention and treatment of tuberculosis -
                                                                                                                                                                                  tetra-antigen fusion protein, termed TbF-2, composed of the antigens TbRa3, 39kv, Tb38-1 and DPEP. The fusion protein is expressed in host cells using a vector carrying a polynucleotide (see AAZ20198) comprising the 4 coding sequences. The invention provides fusion proteins (see AAX3059-71) containing at least 2 M. tuberculosis antigens. The new fusion proteins and polynucleotides encoding them are useful as vaccines for preventing tuberculosis (claimed) for diagnosis (via in vitro assays or intradermal skin tests for detection of anti-M. tuberculosis antibodies), monitoring of disease progression, and treatment of tuberculosis. They are more effective immunogens than mixtures of the individual protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     seq_name: /SIDS1/gcgdata/hold-geneseq/geneseqp-embl/AA1999.DAT:AAY39224
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             54 CGAGCGGATCTCCGGCGACCTGAAAACCCAGATCGACCAGGTGGAGTCGA 103

The present invention describes polypeptides comprising an immunogenic part of a Mycobacterium tuberculosis antigen (Ag). Also described are vaccines and fusion protein containing M. tuberculosis Ag's.

M. tuberculosis Ag's. DNAs encoding them, derived fusion proteins and other polypeptides fragments, can be used in pharmaceutical compositions or vaccines to generate a protective or therapeutic immune response to M. tuberculosis and as reagents in skin tests for diagnosis of tuberculosis. Ag can induce proliferation of, or cytokine secretion tuberculosis-immune subjects. AAZ19249 to AAZ19460 and AAX39083 to AAX39225 are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New antigens from Mycobacterium tuberculosis useful in diagnostic skin tests and protective or therapeutic vaccines or compositions

The present invention describes polypeptides comprising an immunogenic part of a Mycobacterium tuberculosis antigen (Ag). Also described are vaccines and fusion protein containing M. tuberculosis Ag's.

M. tuberculosis Ag's, DNAs encoding them, derived fusion, proteins and other polypeptides fragments, can be used in pharmaceutical compositions or vaccines to generate a protective or therapeutic immune response to M. tuberculosis and as reagents in skin tests for diagnosis of tuberculosis. Ag can induce proliferation of, or cytokine secretion by, T. Bor natural killer cells and/or macrophages in tuberculosis-immune subjects. AAX19249 to AAX19460 and AAX39083 to AAX39225 are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                    seq_name: /SIDS1/gcgdata/hold-geneseq/geneseqp-emb1/AA1999.DAT:AAY39176

This invention describes novel recombinant antigens and their encoding nucleic acids derived from Mycobacterium tuberculosis. The novel polypeptides are useful for detecting M. tuberculosis infection in a biological sample by detecting antibodies which bind with the polypeptides, and are useful as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as current vaccination strategies do not provide 100% immunity.
                                                                                                                                                                                                                                                                                                                                            seq_name: /SIDS1/gcgdata/hold-geneseq/geneseqp-embl/AA1999.DAT:AAY39081
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Antigen; diagnosis; detection; infection; antibody; immunisation;

The sequence represents Mycobacterium fusion protein antigen TBF15 consisting of a His tag for purification, antigens Ra3, 38kD, 38-1 and FL-TBH4 (full-length TBH4). Compositions comprising at least 2 heterologous antigens, as a fusion protein, and vectors expressing the fusion proteins are used as vaccines to prophlactically immunise mammals (especially humans) against infection by Mycobacteria. The compositions contain at least 2 heterologous antigens that increase the serological sensitivity of individuals infected with tuberculosis, a disease frequently affecting patients with acquired immunodeficiency disease, AIDS.
